SUMMARY

Full stack developer who ships systems to production end to end: requirements with business teams, architecture, TypeScript front end and back end, cloud, security and deployment. I integrate LLMs from multiple providers (Claude, DeepSeek, models via OpenRouter) into real systems and use AI agents in development, always backed by automated tests and review. Background in industrial R&D.

EXPERIENCE

Full Stack Developer · Enviagora — Sep 2026 – present

- Led the migration of the HR platform to Google Cloud (Cloud Run, Cloud SQL, Cloud Storage, Secret Manager), with GitHub Actions deploys via Workload Identity Federation, automatic staging, CI-gated production, health checks and revision rollback.
- Shipped the Digital Onboarding module: candidate document upload, AI document reading via OpenRouter with fallback and circuit breaker, PDF/ZIP dossier, transactional email and idempotent Google Sheets and Forms integrations.
- Architected a BI hub monorepo (Next.js, Fastify, PostgreSQL) with sector- and role-based access, audit trail, TV mode and OAuth with PKCE and AES-256-GCM encrypted tokens.
- Built a mobile 5S audit system with server-side scoring, anti-fraud design and WMS-integrated login; cut the audit list from 5,089 ms to 98 ms with 300 records.
- Built dashboards integrated with ClickUp and Google, and a 3D office planner with three.js.
- Cut mobile layout shift from 0.585 to 0.014; 550+ automated tests across projects, with spec-driven development (specs, ADRs, PRs).

R&D Assistant · Soft Film — Jan 2026 – Aug 2026

- R&D in a manufacturing environment: reviewed production recipe components, handled production order reporting and reclassification, and bridged with Quality Control.
- Automated with Python validations that were done manually in Excel.

Apprentice · Hutchinson — Aug 2024 – Dec 2025

- Administrative routines in a manufacturing environment.

Apprentice · Panasonic do Brasil — Aug 2023 – Jul 2024

- Administrative routines in a corporate environment.

PERSONAL PROJECTS

- Order Validator (Python, FastAPI, Claude, MCP): API that validates spreadsheets against business rules; an LLM agent recovers rejected orders as structured JSON (5 of 10 recovered). MCP server and 13 end-to-end tests.
- Trend Radar (Python, Docker, Fly.io): autonomous pipeline that ingests external APIs and classifies signals with an LLM agent.

SKILLS

Front end: TypeScript, React, Next.js, Tailwind CSS, TanStack Query, three.js
Back end & data: Node.js, Fastify, Prisma, Zod, PostgreSQL, Python, FastAPI, Pandas, Redis
AI: AI agents, LLMs (Claude, DeepSeek), OpenRouter, MCP, structured outputs, AI-powered OCR, n8n
Cloud & quality: Google Cloud (Cloud Run, Cloud SQL), GitHub Actions, Docker, Vitest, Jest, Playwright, WCAG AA

EDUCATION

Systems Analysis and Development (associate degree) · IFSP — Feb 2026 – Dec 2028 (in progress)
Systems Development Technician · SENAI — Mar 2024 – Aug 2025

RECOGNITION

- SAGA SENAI Ambassador – Innovation Projects (2026): the only student selected on merit to represent the school and mentor students.
- Brazilian Astronomy and Astronautics Olympiad: gold (2021) and silver (2022).
